Task 1: Login Screen in the Storyboard

```
import Foundation

var email = ""
var password = ""

func login(email: String, password: String) {
    if email.isEmpty || password.isEmpty {
        print("Enter email and password")
    } else {
        print("Login submitted successfully")
    }
}
login(email: email, password: password)

email = "user@example.com"
password = "123456"

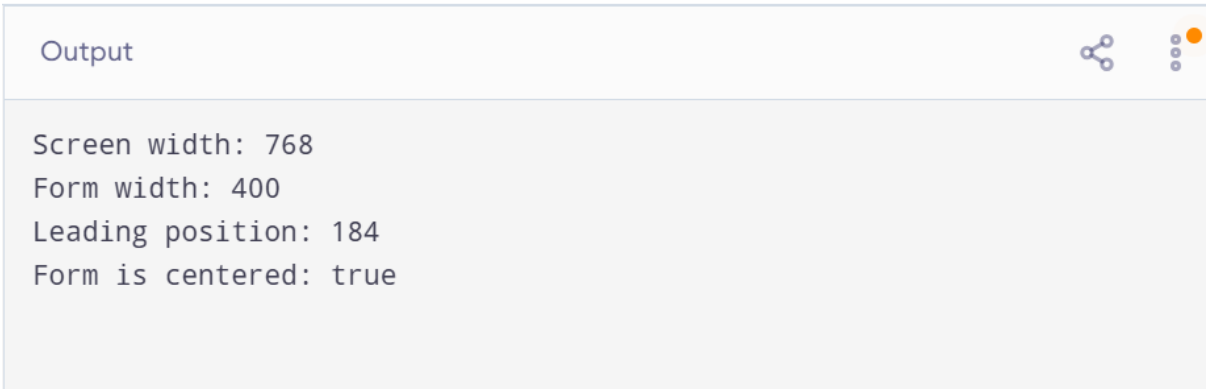

login(email: email, password: password)
```

Task 2: Build a Login Screen with Auto Layout

```
import Foundation

let screenWidth = 768.0
let maximumWidth = 400.0
let horizontalMargin = 20.0
let availableWidth = screenWidth - (horizontalMargin * 2)
let formWidth = min(availableWidth, maximumWidth)
let leading = (screenWidth - formWidth) / 2
print("Screen width: \(Int(screenWidth))")
print("Form width: \(Int(formWidth))")
print("Leading position: \(Int(leading))")
print("Form is centered: \(leading == (screenWidth - formWidth) / 2)")
```

Task 3: Debug Broken Layouts

```
import Foundation
print("1. Missing constraints")
print("Fix: Add vertical position and height constraints.")

print("\n2. Conflicting constraints")
print("Fix: Remove conflicting constraints or adjust their constants.")

print("\n3. Labels overlapping or clipping")
print("Fix: Use proper spacing and content compression resistance.")

print("\n4. View in the wrong position")
print("Fix: Set layout constraints after adding the view.")
```
