Task 1: Settings Form with Controls

```
import Foundation

var notifications = true
var level = "Intermediate"
var volume = 0.7
var studyHours = 4

func showSummary() {
    print("Notifications: \(notifications ? "On" : "Off")")
    print("Level: \(level)")
    print("Volume: \(Int(volume * 100))%")
    print("Study Hours: \(studyHours)")
}

showSummary()
```

Output

```
Notifications: On
Level: Intermediate
Volume: 70%
Study Hours: 4
```

Task 2: Present a Bottom Sheet

```
import Foundation

class HomeView {
    var status = "Home screen"
    func showDetail(message: String) {
        print("Bottom Sheet: \(message)")
        status = "Detail screen opened"
    }
    func closeDetail() {
        status = "Home screen"
        print("Bottom sheet closed")
    }
}
let home = HomeView()
print(home.status)
home.showDetail(message: "Welcome to the detail screen")
print(home.status)
home.closeDetail()
print(home.status)
```

Output

```
Home screen
Bottom Sheet: Welcome to the detail screen
Detail screen opened
Bottom sheet closed
Home screen
```

Task 3: Alerts and Action Sheets

```
import Foundation
func deleteAccount(confirmed: Bool) {
    print("Alert: Delete account?")

    if confirmed {
        print("Account deleted")
    } else {
        print("Deletion cancelled")
    }
}
func askName(_ name: String) {
    print("Enter your name")
    print("Name: \(name)")
}
deleteAccount(confirmed: false)
deleteAccount(confirmed: true)
askName("Manoj")
```

Output

```
Alert: Delete account?
Deletion cancelled
Alert: Delete account?
Account deleted
Enter your name
Name: Manoj
```
